ECOmanager

ECOmanager is the umbrella term for Zeppelin Rentals' construction site power management system

...is the proactive management of office and crew facilities

...has built-in artificial intelligence that helps optimise power consumption and minimise CO2 emissions

...is the collection of emissions and consumption data, with the ability to influence consumption patterns.

...can measure, control and report on indoor climate, heating and water consumption and other connected devices such as charging stations for electric cars.

Benefits of ECOmanager

ECOmanager

... makes it easy to download consumption data for reporting purposes
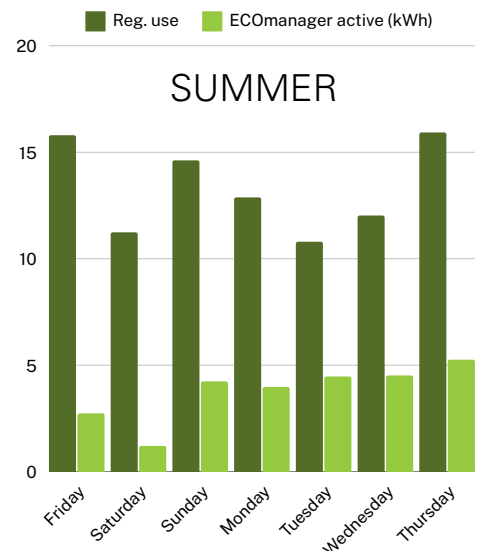

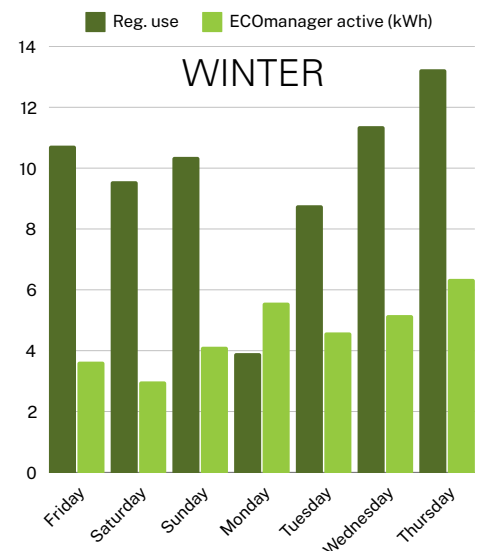

... gives you an online portal that makes it easy to monitor your module city's consumption - 24/7

... is centrally controlled so you don't have to do anything to achieve the savings

... is specially designed to fit into the modules you already use, so they install quickly and easily.

WINTER — Reg. use / ECOmanager active (kWh)

SUMMER — Reg. use / ECOmanager active (kWh)

With ECOmanager

- You get lower CO2 emissions
- You'll make a financial saving in your consumption in the modules
- Your company profile becomes greener and you actually make a real difference
- Data collection for your reporting is done with a single click.
- You'll be free from worries about whether the module cities are being utilised optimally and appropriately
- Get a full overview of your module city and its usage, putting an end to worries and unreported figures.
